KNOWN GAPS (cite-or-unknown rule applied honestly)

Companion ground/power wires not enumerated in cut list for analog sensors, coils, injectors.
These pages show only the signal wires as written; ground returns are pigtail-bundled (e.g. WPCTS30 covers both CTS pins) and 5V ref / +12V power wires need separate enumeration in a future cut list revision.

Lighting, switch, audio, and accessory connector PNs not in K5_connector_shopping_list.txt — these render as "(connector PN unknown)" on their respective pages. Filling these requires vendor doc lookup.

Wire lengths are zone-distance estimates (cut list +15%/+20% pad). True measured lengths require physical tape work on the vehicle and population of K5_landmarks.yaml (currently all values null).
